

DEVASTATING **5G FLAW** EXPOSED!

REVEALED: Shocking Truth About The Fatal Technology Flaw That Could Bring America's Wireless Network To Its Knees And The \$5 Stock That Could Be The Biggest Tech Opportunity Of All Time.

Dear Reader,

You've probably heard that 5G—the next generation wireless technology—has the potential to be a bigger leap for mankind than even the Internet itself.

5G will impact every human on the planet... in ways we can't yet fully imagine or appreciate.

The *Washington Post* refers to 5G as:

“An economic renaissance.”

—The Washington Post

The Mayor of Sacramento, California, where a 5G trial launched in early 2019, shared:

“5G literally has the potential to start the Fourth Industrial Revolution.”

—Darrell Steinberg

And Qualcomm Senior Director Rasmus Hellberg recently said this about 5G:

“It has the flexibility to support services that haven’t even been imagined today.”

—Rasmus Hellberg

Think back to the early 1990s... before you’d ever seen a web browser.

At that time, no one could have imagined companies like Amazon, Google, or Netflix would ever be created...

Let alone become some of the largest and most well-known companies in the world.

Those businesses simply **could not exist** until the Internet was available.

We’re in a very similar situation today with 5G.

Except 5G will make the Internet look like a child’s toy.

You need to think in these terms...

“5G = “The Internet” x 1,000”

And the profits you see as an early 5G investor could be 1,000 times greater than they were for any Internet-era company.

5G will allow self-driving cars to communicate with one another in real time... reducing traffic jams and making collisions and other traffic accidents a thing of the past.

It will allow expert surgeons to operate on patients thousands of miles away by giving them precision control over high-tech robotic arms.

And 5G will make the *Internet of Things* a reality... allowing every thermostat, appliance, and piece of clothing in your home to communicate, synchronize, and optimize your family's comfort, health, and safety.

5G will add **\$3.5 trillion to the U.S. economy**... that's more than the annual GDP of the United Kingdom.

And experts predict it will add as much as \$12.3 trillion to the global economy over the next fifteen years.

It will create up to **22 million American jobs**... more than the entire combined populations of Ireland, Norway, Finland, and Denmark.

It will start new industries, businesses, and products we haven't even dreamed of yet.

The impact 5G will have on the world will be every bit as transformational as the combustion engine, the light bulb, the personal computer, and the Internet.

Maybe even all those inventions combined.

But before any of that can happen...

There's a **devastating 5G technology flaw** the telecom industry needs to overcome.

In just a minute, I'll give you all the details of this shocking flaw.

I'll also tell you about the company I've uncovered that has single-handedly developed the solution.

When regular investors discover the information I'm going to share with you today... the company with the \$5 stock price and trillion-dollar solution...

They'll start loading up on shares faster than a Porsche on the Autobahn.

Which means, if you follow my simple instructions today, you could quickly find yourself sitting on \$117,385... \$234,770... or even as much as \$469,540... depending on how much you invest.

I know that sounds incredible.

So let me put the numbers into perspective.

To understand what's at stake here... it helps to look back at 5G's less-impressive older brother.

The Last Wireless Rollout Turned Everyday Investors Into Millionaires

4G... or 4th Generation technology... came online starting in early 2009.

It was the first wireless generation to put high-speed Internet access in the palm of your hand.

It's no surprise demand for new "smartphones" went through the roof during this period.

Since the start of the 4G rollout in 2009, Samsung—makers of the Galaxy line of smartphones—has popped 526%.

And iPhone maker Apple Inc. has skyrocketed over 1,666%.

Not surprisingly, manufacturers of the semiconductor components required to build smartphones also saw incredible gains.

Skyworks Solutions—makers of mobile Radio Frequency chips—is up 1,881% since early 2009...

Chipmaker Qorvo (QRVO) is up 2,130%...

And companies specializing in 4G cellular antennas and real estate leasing also went along for the ride.

Tower operator SBA Communications shot up 1,305%.

SBA Communications (SBAC)

Of course, these quadruple-digit gains are exceptional and there's no way I can guarantee you'll see similar results. After all, there are risks with every investment.

But if you'd invested as little as \$5,000 in each of Samsung, Apple, Skyworks, CEVA, Qorvo, and SBA in early 2009, today you'd be sitting on a little over \$400,400.

Think about how that kind of money could change your life.

You could pay off your mortgage in cash...

Take a first-class world tour vacation...

Or put your grandkids through college.

And as amazing as these 4G windfall profits are, **they're nothing** compared to the opportunities 5G will offer.

I expect the \$5 stock I've uncovered to dwarf them all.

In just a moment, I'll give you all the details on this company and how its technology is mission critical to the success of the 5G rollout... here in America and across the entire world.

But first, let me introduce myself...

I'm Dr. Stephen Leeb

You may recognize me from my appearances on NPR, Fox News, CNN, and Bloomberg...

Mentions of my work in USA TODAY, Business Week, *The Wall Street Journal*, and *The New York Times*...

Or from one of my eight best-selling books... including *The Oil Factor*, *The Coming Economic Collapse*, and *Red Alert*.

For over three decades, I've been following, researching, and predicting large-scale economic trends.

And I've done it with pinpoint accuracy countless times.

I predicted the Dot Com Bubble of 2000...

Oil breaking \$100 a barrel in 2007...

Price of oil

The 2009 stock market rebound...

DJIA

And gold breaking \$1,500 an ounce in 2011...

Price of Gold

My most recent book "Red Alert" contains a foreword by billionaire investor Tom Kaplan who wrote the following:

"I have been a beneficiary of his wisdom in ways that have benefited both my mind and my pocket book. To me, Stephen is one of the greatest long-term strategists of his generation."

—Tom Kaplan, Billionaire Investor

I don't share any of this to brag.

I share it because I have a 20-year track record for identifying massive market moves **before** they happen, and because...

Everyday investors who've followed my work have had opportunities to make life-changing fortunes... not just once or twice, but dozens of times over the past two decades.

And I'm not exaggerating when I say 5G could be the **most important development in our lifetime.**

It will impact us all on a global level in ways no other technology ever has...

Communications, health care, transportation, national security, entertainment, banking and investing, energy, manufacturing, and beyond...

5G's reach will be virtually limitless.

Make no mistake... the coming changes will turn some average investors into multi-millionaires.

And I'd like you to be one of them.

So if you're serious about taking control of your financial future, you'll want to pay very close attention to what I'm about to share.

5G's Devastating Flaw

If you're like most Americans, you've gotten used to picking up your smartphone to make a phone call, send a text message, or check email and having it...

Just work.

So it would be perfectly reasonable for you to expect the latest, greatest 5G phones to be **at least** as reliable as today's phones.

That's where this story takes a startling turn.

Now, I won't get too deep into the science behind wireless communications but...

All cellular devices send and receive data using what are called Radio Frequency waves.

The current standard... 4G... uses a slice of the Radio Frequency spectrum below 6 Gigahertz.

RF waves in this range are strong...

A single 4G antenna can send a cellular signal up to 22 miles.

It's the main reason the phone in your pocket today gets good reception most of the time.

And because they're strong, 4G signals can easily reach your smartphone whether you're sitting in the basement of your home, behind a desk in an office building, sipping an Americano in a coffee shop, or driving across town in your car.

One of **5G's greatest features** is that it can send and receive data at speeds up to 100 times faster than 4G.

5G can do this because it's using a higher and faster range of the Radio Frequency spectrum... between 30 and 300 Gigahertz.

Because they have a very small wavelength, signals in this range are called "millimeter waves" or mmWaves.

But compared to 4G signals, mmWaves are 90-pound weaklings.

A brand-new, high-speed, high capacity 5G antenna can only transmit a wireless signal just a little over 500 yards.

Plus, if there's an obstacle like a wall, a car, or even the leaves of a tree sitting between the antenna and your phone... no 5G for you.

And if that weren't bad enough, 5G mmWaves can be scrambled by rain, snow, sleet... and even heavy fog.

Imagine not being able to make a phone call because it's raining outside.

Obstacle	4G	5G
Over 1,600 ft from nearest antenna	✓	✗
Walls of your home or office building	✓	✗
Body of your car	✓	✗
Tree leaves	✓	✗
Rain, snow, sleet, or fog	✓	✗

None of this makes 5G sound like the “Greatest Technology of all Time,” does it?

And that’s why so few investors know the details of the tiny \$5 stock I’m going to detail for you now...

Or how it could deliver gains of up to 2,247% in the coming months...

Allowing you to turn \$5,000 into \$117,385...

\$10,000 into \$234,770...

Or \$50,000 into a staggering \$1.17 million.

Details Of The 5G Solution

The \$5 “5G Savior” plans to solve the 5G Flaw in two very different ways.

Fix #1: The Brute Force Approach

If a 5G signal can only travel a few hundred yards from the nearest cell tower antenna, the surest way to increase its reach is... you guessed it...

Install more antennas.

Remember, a 4G antenna can transmit a cellular signal up to 22 miles in all directions.

For 5G to offer similar coverage, a network of “repeater” or “small cell” antennas needs to be installed every 1,000 feet or so.

And the antennas need to communicate with one another and eventually back to a central base station.

A recent study found there are over 323,000 cellular towers in the United States today.

It's safe to assume almost all of these are 4G towers with a signal reach of 22 miles.

For 5G to offer the same level of signal strength and reliability, cellular carriers may need to install up to **50 times more antennas** than are currently in use.

That means within the next five years, we could see as many as **16 million 5G antennas** installed... just in the United States.

Before long, there's a good chance you'll see one of these little black cylinders on lamp posts, utility poles, and building rooftops on every block in the country...

Several years ago, the \$5 company figured out there'd be huge demand for 5G antennas.

So they invested heavily in designing and building some of the best, cutting-edge antennas in the world.

In just a minute, I'll explain why I believe the \$5 company will be hired to supply a major percentage of America's 16 million new 5G antennas.

And because the company does business in more than 130 countries around the world, the total number of antennas they sell over the next five years could easily be well into the hundreds of millions...

Potentially generating tens if not **hundreds of billions** in new revenue.

That kind of money can push even the smallest company's stock prices through the roof.

This is why it's absolutely critical that you load up on shares as soon as possible.

5G cellular antenna

Once you start hearing this company's name on the evening news...

It will be too late.

Some other investor will be pocketing the gains that should have been yours.

So read on to ensure that doesn't happen.

Fix #2: The High-Tech Solution

As you've seen, the brute force approach involves selling large quantities of a product that customers can't exist without.

Over the years, that approach has turned tiny one-room companies into billion-dollar titans of industry.

Think of Rockefeller's Standard Oil...

Jobs' and Wozniak's Apple...

Or Gates' Microsoft.

Brute force is a formula that worked 100 years ago. And it will work 100 years from now.

But this \$5 company didn't stop at brute force. They're smarter than that.

You see, they figured out that with 50 times more antennas, 5G signals would collide and interfere with one another like a room full of feral cats... scrambling signals and making a mess of cellular reception.

Think about it for a minute...

Will you really care that you can download a blockbuster movie to your phone in four seconds if every phone call you make gets scrambled by nearby interference?

Of course you won't.

So the company developed a genius solution to this problem...

They call it **beamforming** and it's one of the most important 5G technologies in the world today.

Instead of using the 4G method of spraying signals in all directions at once and hoping each one finds the right user's smartphone...

5G beamforming tracks the exact location of each connected device and sends a laser-focused "beam" of data directly to it...

Even when the user is moving.

Beamforming technology is also smart enough to identify obstacles like trees, buildings, or cars when they're in the way...

Then bounce 5G signals off nearby structures so they find the device they need to reach.

Also by concentrating and focusing mmWaves, beamforming technology makes 5G signals stronger.

Meaning they have fewer problems penetrating walls, trees, and precipitation.

This really is some next-level, futuristic technology we're dealing with here.

And this \$5 company is at the forefront.

It knows these technologies have the potential to make 5G a reality so they've been busy pumping beamforming antennas and other related components out of their factories as fast as they possibly can.

And telecommunications companies are practically lining up to buy them... much like Apple customers on the morning of a new iPhone release.

In just a minute, I'll show you how to get a special report I've prepared on this \$5 hidden gem.

The information in this report could help you turn \$5,000 into \$117,385 or more over the next 12 months.

And you can have it... absolutely free.

But first, let me show you why I'm dead certain these kinds of returns are going to happen...

Patent Licensing Will Generate Billions

The company owns more than 1,000 5G technology patents.

This means every time a smartphone manufacturer builds a 5G phone, it owes the company a licensing fee.

My research shows this fee could be as much as \$3.50 for every 5G smartphone sold anywhere in the world.

A recent study showed the number of 4G phones in use globally in 2018 was close to 921,000.

If expert estimates are even in the ballpark, as many as **1.9 billion 5G smartphones** will ship between now and 2023.

This means companies like Samsung, Apple, LG, Motorola... even foreign phone manufacturers like Huawei... will owe the company a licensing fee for every last one of those 1.9 billion phones.

At \$3.50 per phone, the \$5 company stands to generate as much as **\$6.65 billion**... just from licensing fees.

Yes... that's Billion... with a 'B.'

And patent licensing is all profit. The company doesn't need to design, build, or sell anything new.

It gets paid years into the future for work it's done in the past.

Patent licensing forms a kind of fortress wall around the company...

A wall built of solid granite and covered top to bottom in razorblade barbed wire...

Designed to lock competitors out and keep money flowing in.

Patent licensing is almost like turning on a money tap and filling buckets with cash... every day of the year.

And with \$6.65 billion pouring through the pipes, the company earns **\$4.6 million dollars a day**... for doing literally nothing!

For a moment, just imagine what a **\$6.65 billion patent licensing jackpot** can mean for a \$5 stock.

It could easily soar 5x... 10x... 20x... maybe even 100x.

Meaning a modest \$10,000 stake could put add as much as \$1 million to your investment account.

But a \$6.6 billion patent windfall isn't all this \$5 company has on the horizon...

Today, you can buy the company's stock at very close to \$5 a share.

And so far, the company's name hasn't been plastered over the evening news.

But that doesn't mean they're unknown within the 5G wireless industry.

Over the past few years, the company has developed a reputation as one of the few companies who can actually make 5G technology work.

So as you might expect, cellular companies have been paying a lot of money for the right to partner with them.

As of last count, the company has signed over 40 major contracts with telecom companies and governments around the globe.

And since March 2019, they've closed an average of one major contract each week.

Plus, they have a steady stream of potential customers in negotiation... many of which could turn into billion-dollar contracts.

So far, they've signed deals with companies in Europe, South America, Asia, the Middle East, Africa, and North America... including contracts with **four**

top-tier U.S. cellular carriers.

While the dollar value of these contracts isn't public knowledge, my sources indicate one of them is a **multi-year deal worth \$3.5 billion.**

Even if the other 39+ contracts are worth only 20% of that amount, the company could secure as much as **\$31 billion in new revenue over the next few years.**

And as fantastic as the revenue growth outlook is for this \$5 stock, there are **two recent events—both involving the Trump White House**—that will likely result in the company locking down even more business than anticipated.

Here's the first one...

The President Wants 5G Rolled Out ASAP

Even President Trump is publicly demanding the new technology be implemented in the U.S. as soon as humanly possible.

Earlier this year, he tweeted...

When the “Leader of the Free World” voices an opinion this forcefully, I expect every telecom company in the country to fall into line and double down on their 5G efforts.

Rather than wasting time trying to fix 5G's flaws themselves, I predict they'll rush to find a partner—like the \$5 company—who can get them up and running as quickly as possible.

But “tweets” aren't the only way the White House is helping the \$5 company because...

Trump Has Banned Their Biggest Competitor

Earlier this year, President Trump banned Chinese 5G giant Huawei from selling phones and other communications products in America.

As a direct result, Australia, New Zealand, and Japan have either restricted or completely banned the use of Huawei products. Several other countries could follow suit in the coming months.

This means even more business will flow into this \$5 juggernaut's pockets.

One thing is clear...

The global 5G rollout is barreling toward us like a freight train.

And with the company signing billion-dollar contracts in dozens of countries around the globe, it won't be long before Wall Street catches wind of its momentum.

When that happens, you can say goodbye to its \$5 stock price.

Where it goes from there is anyone's guess.

If it hits \$100 a share... a \$5,000 stake could turn into \$100,000.

When it reaches \$250, that same \$5,000 could **add \$250,000 to your account.**

An extra \$250,000 could let you...

Become debt-free for the first time in years...

Put an addition on your home...

Or walk into a dealership and buy a new Cadillac without a second thought.

And the stock price could go much higher than \$250.

What makes me so sure?

Well, imagine buying stock in an oil company a few months before Ford released the Model T.

Or loading up on electric utility shares just as the lightbulb was introduced.

And think about buying stock in a steel manufacturer right around the time the Transcontinental Railway was being built.

During those periods, a small number of everyday investors caught these waves at just the right time...

And created generational wealth for themselves and their families...

The kind of wealth that's sending their great-great-grandchildren to Ivy League colleges 100 years later.

But the opportunity you have today is **even bigger**.

And there hasn't been a better time in history for **YOU** to reap the rewards.

Right now, in cities around the world, wireless companies are beginning to install 5G beamforming antennas on lamp posts, utility poles, and building rooftops.

Many of them are running small customer trials to work out technical snags before starting country-wide installations.

At this moment, the global 5G rollout is just getting off the ground.

It's a lot like an arrow in skilled archer's bow... building force and potential with every inch she draws the arrow back.

When the archer releases, momentum will take over.

The arrow will fly out into the world with unstoppable force.

Once the 5G rollout is in flight, companies and governments around the world will flood the \$5

company with orders for tens of millions of beamforming antennas...

Billions in patent licensing fees will pour in...

Sending its stock price into the stratosphere.

Investors who act today can sit back and enjoy the ride...

Knowing they bought stock **before the frenzy**.

Those who wait?

They'll be on the sidelines wondering how much different their lives would have been if only they'd bought in at \$5 a share.

Snagging this \$5 gem today is like buying Microsoft stock in 1986...

When **NO ONE** could predict the impact personal computers would have on the world.

Microsoft (MSFT)

But 5G will be bigger.

It's like buying Cisco stock in 1990...

When **NO ONE** had a clue how the Internet would change the world forever.

Cisco (CSCO)

But 5G will be bigger.

It's like buying Netflix stock in 2002...

Back when you were driving to the DVD rental store in the rain and paying late fees whenever you missed our return deadline by 30 minutes...

And **NO ONE** could imagine being able to “stream” any television show or movie you wanted to watch... anytime of day... on any device.

But 5G will be bigger.

Your Financial Future Starts Right Now

A year from now, you can look back on today as...

The anniversary of the most important financial decision of your life...

One that lifted you and your family to a level of wealth you'd only ever dreamed of.

Or...

You can look back on today as another missed opportunity.

A day when you “could have” changed your financial future but...

You let it pass you by.

This opportunity won't be repeated in our lifetime.

You'll need to act quickly or it will disappear forever.

So to help you get started right away...

I've prepared an exclusive report I'd like to send you absolutely free.

It's called...

The 5G Fix: How To Profit From The \$5 Stock That Fixes 5G's Fatal Flaw

Inside, you'll discover everything you need to take advantage of the once-in-a-lifetime 5G opportunity, including:

- ✓ Details of the shocking “next-generation” technology flaw, the opportunity it’s created for any company who can fix it, and how the \$5 company’s suite of products and services have placed it in pole position to reap **tens of billions in new revenue** during the global 5G rollout.
- ✓ The brand-new technology (developed deep within the company’s research laboratory) at the core of the “5G Fix” that allows up to 128 miniature 5G antennas to fit inside a box not

much bigger than a milk carton. (*This one innovation alone could be **a trillion-dollar idea!***)

- ✓ How the size and complexity of the global 5G rollout will **create more demand for the company's products** (and for a longer period of time) than ever before in history. (*Early investors could ride gains well into the next decade... maybe longer.*)
- ✓ How the company's range of products and services make it one of the few vendors on the planet who can provide end-to-end 5G solutions. (*Making it likely they'll secure **more contracts for bigger dollar amounts** than any of their competitors.*)
- ✓ Plus... How a recent shift in the company's manufacturing focus could skyrocket profit margins and earnings growth... **generating even faster stock price increases!**

As you've seen, this company is at the epicenter of the 5G revolution.

It has innovative technologies, like beamforming, that every communications company in the world needs in order to overcome many of 5G's technical flaws.

It has patents that all but guarantee a cash windfall of up to \$6.65 billion in the next four years... all for work it's done in the past.

Its already secured over 40 contracts with companies and governments around the globe—including four major U.S. cellular providers—setting them up for as much as \$31 billion in new sales.

Its number one competitor is out of the running here in the U.S. and in a growing number of countries around the globe... opening the potential for hundreds of additional billion-dollar deals.

And President Trump is actively pushing all U.S. companies to "step up" their 5G efforts.

To say this \$5 company is the most important participant in the global 5G rollout is an understatement.

I'd go so far as to say, without them... 5G could be 10 years away. Maybe more.

The 5G Fix: How To Profit From The \$5 Stock That Fixes 5G's Fatal Flaw contains exact instructions on how to claim your stake in the \$12 trillion opportunity 5G is creating.

If I were selling this report, I'd have to charge at least \$79.

After all, precise instructions on how to potentially **add hundreds of thousands to your investment account** is easily worth \$79.

In fact, it's worth many times that amount.

But today, I'd like to send you this report absolutely free.

You see, one of my greatest pleasures in life is helping people become wealthy.

And when I uncover an opportunity of this magnitude...

I want to share it with as many people as possible.

After all, at \$12 trillion... 5G will generate wealth for millions of people.

And to claim your stake, you only have to make one simple decision today...

And accept this free report.

But before I show you how to do that, there are two bonuses I'd like to send you.

BONUS REPORT #1: *Secret Highway All-Stars: Five Plays That Will Make Early 5G Investors MILLIONS (Value \$59)*

Inside, I reveal **five first-rate companies** positioned to rake in billions in new business from the coming 5G tsunami, including:

- ✓ A high-tech trailblazer who could see customers upgrade as many as one billion devices to new 5G versions within the next 24 months... generating as much as **\$600 billion in revenue** and sending its stock into orbit.

- ✓ One semiconductor company who currently enjoys a 70% market share and is **the only manufacturer of the proprietary processing chips** used in one of the world's most popular smartphones.
- ✓ An under-the-radar "specialty chemical" company who manufactures components used in **every smartphone, tablet, and electric car** made anywhere in the world. Even a small stake in this one could skyrocket as 5G ushers in the era of self-driving cars.

BONUS REPORT #2: *Why Security Stocks Will Reap Big Profits in 2019 (Value \$59)*

Over the next decade, 5G is likely to generate up to 1,000 times more data than 4G.

And more data means more opportunities for hackers and cyberterrorists to steal identities, influence elections, and sabotage our infrastructure.

In this report, I reveal my two top defense and security picks in a \$200 billion industry that's growing every year.

Your **5G Fix** report and two bonus reports have a combined value of \$197.

But I want to send you all three today as my free gift to you.

All I ask is that you accept a risk-free trial membership in my premier investment advisory.

It's called...

The Complete Investor

And I'm opening the doors for you to join, today.

I have a single goal with **The Complete Investor** and it's one I take very seriously...

To help you become wealthy.

I'm not satisfied delivering mediocre returns that just barely beat the market.

Instead, ***The Complete Investor*** is designed to present you with opportunities to generate life-changing fortunes...

Just like the ones you'll discover inside the three reports you'll receive today:

- ✓ ***The 5G Fix: How To Profit From The \$5 Stock That Fixes 5G's Fatal Flaw (Value \$79)***
- ✓ ***Secret Highway All-Stars: Five Plays That Will Make Early 5G Investors MILLIONS (Value \$59)***
- ✓ ***Why Security Stocks Will Reap Big Profits in 2019 (Value \$59)***

But I want to make one point perfectly clear...

As excited as I am about 5G right now, ***The Complete Investor*** is not a 5G-only advisory.

In fact, it's not just a technology stock advisory either.

I analyze the economy, the markets, and individual stocks day in and day out.

And I work tirelessly to bring members the very best stock picks in the market... no matter what industry they're in.

In the last two years alone, ***The Complete Investor*** has delivered members 27 double and triple-digit trade opportunities.

Here are a few highlights...

158% on Amazon (AMZN)...

Amazon (AMZN)

206% on Microsoft (MSFT)...

Microsoft (MSFT)

370% on Alexion Pharmaceuticals (ALXN)...

Alexion Pharmaceuticals (ALXN)

126% on CVS Health (CVS)...

CVS Health (CVS)

152% on Thermo Fischer Scientific (TMO)...

Thermo Fischer Scientific(TMO)

245% on Biogen (BIIB)...

Biogen (BIIB)

And 161% on Bioverativ (BIVV)...

Bioverativ(BIVV)

If you'd invested as little as \$5,000 in each of these opportunities, today you'd be sitting on \$105,895 for an all-in return of 203%.

I often receive letters and emails from people all around the country who've followed my recommendations and are eager to share their results.

They include people like Ken K. from Eagle, Idaho, who writes:

Ken K.
Eagle, Idaho

“I have been following Dr. Leeb for many years and his assessments are typically right on the mark. His commentary is timely and actionable... advice you can take to the bank.”

There's Amelie G. of Ann Arbor, Michigan who had this to say:

Amelie G.
Ann Arbor, Michigan

“The research team and the ideas put forth have been invaluable to me. I particularly appreciate the email updates on crisis days, it helps me to steady myself and look at the big picture not just the short-term. Thank you, Dr. Leeb!”

And Kevin S. from Los Angeles, California who shared:

Kevin S.
Los Angeles, California

“I have been a loyal follower of Dr. Leeb, bought all of his books, seen all of his videos, webinars, get all of his newsletters, and I am way better off for it as a retail investor. In today's uncertain world economy, getting plugged into Dr. Leeb's message should be on top of everyone's list if they want to learn how to thrive in these turbulent times.”

Donald G. from Schenectady, New York, who shared:

Donald G. ★★★★★
Schenectady, New York

“Following the recommendations of TCI, I have for the past 20 years beating the S&P 500 Index in average annual growth per year.”

There’s Ted P. from Bremerton, Washington, who wrote:

Ted P. ★★★★★
Bremerton, Washington

“It has helped me, in my retirement years, to stay in the ‘game’.”

Then there’s Andy L. of Vista, California:

Andy L. ★★★★★
Vista, California

“I’ve relied on *The Complete Investor* for then years. Easy to understand investment advice built on sound principles that pays dividends.”

And Gary J. from Bloomington, Minnesota, who shared this:

Gary J. ★★★★★
Bloomington, Minnesota

“*The complete Investor* provides the best forward looking appraisals of investments. *The Complete Investor* is the best letter on the market.”

And today, I want to offer YOU the opportunity to join these folks and thousands of other members who benefit from the research and

recommendations I publish each and every month inside ***The Complete Investor***.

It all starts with the one \$5 technology company that holds the keys to making 5G a reality.

5G will add over \$12 trillion to the global economy.

And the company at the center of it all could become the biggest technology stock of all time.

Bigger than Facebook.

Bigger than Google.

Bigger than Amazon.

Right now, you can get in on the ground floor for very close to \$5 a share.

But you must act quickly.

Because as of today...

I Can Only Accept ~~500~~ 387 New Members

If you want to take advantage of this once-in-a-lifetime 5G opportunity, you need to act right away.

I have a limited number of membership spots remaining and I expect them to disappear quickly.

The moment you join ***The Complete Investor***, you'll get instant access to:

- ✓ ***The 5G Fix: How To Profit From The \$5 Stock That Fixes 5G's Fatal Flaw (Value \$79)***
- ✓ ***Secret Highway All-Stars: Five Plays That Will Make Early 5G Investors MILLIONS (Value \$59)***
- ✓ ***Why Security Stocks Will Reap Big Profits in 2019 (Value \$59)***

But these incredible, life-changing opportunities are just the tip of the iceberg because...

You'll also receive instant access to my entire portfolio of open trades I'm tracking in the following sectors:

Technology

Financial

Energy

Security

Transportation

Each month, you'll receive the latest issue of ***The Complete Investor*** containing new outstanding profit opportunities.

You'll also receive **Intra-DayFLASH Alerts** any time I uncover an urgent BUY opportunity or when my research indicates it's time to take profits on an open trade. You'll never wonder what to do or when to do it... I'll be with you every step of the way.

With your membership, you'll also receive:

- ✓ **Weekly Update Emails** — containing important news affecting the economy, the market, or our portfolio positions.
- ✓ **Confidential Members-Only Website** — this secure, password-protected membership site is where you'll have 24/7 access to all past issues of *The Complete Investor*, FLASH Alert histories, portfolio summaries, special reports, and bonuses, and have daily opportunities to interact directly with me and my analysts in our private *Stock Talk* forum.
- ✓ **VIP Concierge Hotline** — where a real live human is available whenever you have a question or concern you need handled right away.

As you can see, ***The Complete Investor*** is the full package.

Becoming a member means you have an expert analyst with 30+ years of experience doing the heavy lifting for you...

Providing all the research, communication, and support you need to create the financial future you've dreamed about.

All that remains is for you to follow my monthly recommendations...

Make a quick call to your broker...

Or tap a few keystrokes inside your online brokerage account...

And you're done.

The profits will take care of themselves.

With everything you receive as a ***The Complete Investor*** member...

You might expect membership to cost thousands of dollars.

However...

Our regular price is \$129 a year.

Given that you'll receive a **minimum of 12 opportunities** to generate double or triple-digit returns each year...

And a single recommendation could cover your annual membership fee 10 times over...

I think you'll agree... \$129 is a fair price.

However, through today's special offer—and only until the remaining membership spots are taken—you won't pay anywhere near that amount.

I've arranged for a steep discount I know you'll love.

You'll have to click the link below to get details.

On the next page, you'll also discover your membership is covered by **two 100% money-back guarantees**. So you can join today with zero risk.

The Next Move Is Yours

5G is about to become the biggest technology evolution in the history of mankind.

There are trillions of dollars and tens of millions of jobs on the line...

And a company with a minuscule \$5 stock price holds the key to making it all become a reality.

Right now, you can choose to walk away and forget everything you've read here today, or...

You can join ***The Complete Investor*** and claim your share of the \$12 trillion jackpot that's coming.

Make no mistake... a lot of people will get incredibly wealthy from the rollout of 5G.

The only question is...

Will you be one of them?

I have only ~~500~~ **387 membership spots remaining** today, and I don't expect them to last much longer.

So if securing your financial future is important to you...

Click the link below and join ***The Complete Investor***, while there's still time.

I hope to welcome you as a new member soon.

Thank you,

Dr. Stephen Leeb
