

If You Own ETFs, Mutual Funds, Or More Than 5 Stocks,  
**SELL THEM ALL NOW!**

**REVEALED: "Escape Plan" for Adding  
\$1,000,000  
Or More To Your Retirement Account...  
Starting Today**

Dear Reader,

Everything you've been told about getting rich in the stock market is completely false.

Wall Street insiders, the mainstream media, and elite business school professors have lied to you for decades.

They've filled your head with cliches like these...

"Don't put all your eggs in one basket."

"Buy and hold for the long term."

"Invest in high-quality ETFs, mutual funds, and blue chip stocks."

"The trend is your friend."

"Be an investor, not a trader."

Let's face it... if advice like this really worked...

You'd already be living your dream retirement... years earlier than you'd planned.

Instead, you continue to follow the "rules"... waiting patiently for the big win that never seems to come.

All while Wall Street brokers, fund managers, and gurus wear \$5,000 suits, drive Porsches, and spend weekends at their multi-million dollar “second homes.”

Clearly, they’re not practicing what they preach.

In 2017, America’s top three Wall Street banks made a total of \$46.7 billion .

And I guarantee you, they didn’t make that kind of money by...

Investing in ETFs, mutual funds, and blue chip stocks...

Or buying and holding for the long term.

No... Insiders play by a completely different set of rules.

And today, I’m going to share with you...

## **The truth about getting rich in the stock market.**

Here’s a trade confirmation ticket...

DATE 2/18/2017		ACCOUNT NUMBER 729003739

NET AMOUNT <b>\$1,980,462.00</b>			

When 57-year-old Joseph Cameron sold a portion of his Microsoft shares, he added an incredible \$1,980,462 to his retirement account.

Denise, Patty, and Joseph live in different parts of the country and have completely different life situations.

But they have three important things in common.

First of all, none of them work for a bank, hedge fund, insurance company, or any other financial institution.

Second, all three are now millionaires.

Third, and most importantly...

All three people share a secret...

A secret that brokers, fund managers, and gurus have kept closely guarded for decades.

A secret designed to make insiders wealthy...

And toss you just enough small wins to keep you coming back for more, year after year.

If you keep playing by the rules you've been taught, you will never have the retirement lifestyle you deserve.

Thankfully, the information in this report can help you flip the system on its head.

No matter how close you are to retiring...

No matter how much money you've saved...

And no matter what your stock market track record is...

It's not too late.

There's still time to transform your retirement dreams into reality.

And I'm going to show you exactly how to do it.

But it's absolutely critical you pay close attention to what I'm going to share in the next few pages.

Because... as Denise, Patty, and Joseph have shown... this information can put seven figures in your retirement account starting today.

But first, let me introduce myself.

## **The “outsider” with an insider’s track record.**

My name is Scott Chan and I'm Chief Technology Analyst here at Investing Daily.

I'm quite different from the financial “gurus” you've heard from in the past.

First of all, I don't have a degree from an Ivy League school.

I'm not a “Wall Street Insider.”

I don't appear regularly on *CNN*, *Bloomberg*, or *CNBC*.

You won't find my work quoted in *The Wall Street Journal* or *The New York Times*.

And I can't claim to have correctly predicted every major market turn in the last 30 years.

Also, I didn't grow up wealthy...

I was raised in New York City by a single mom who worked seven days a week at minimum wage jobs to make ends meet.

She inspired me to work hard, save money ruthlessly, and put myself through an undergraduate degree at New York University... and later, an MBA.

On top of all this, I'm Chinese...

Not exactly an ideal fit for Wall Street's "Old Boy's Club."

All of this kind of makes me an **Anti-Guru**.

And that's a label I'm 100% comfortable with.

My "outsider" status just means I need to work harder and dig deeper than analysts who work for Wall Street banks.

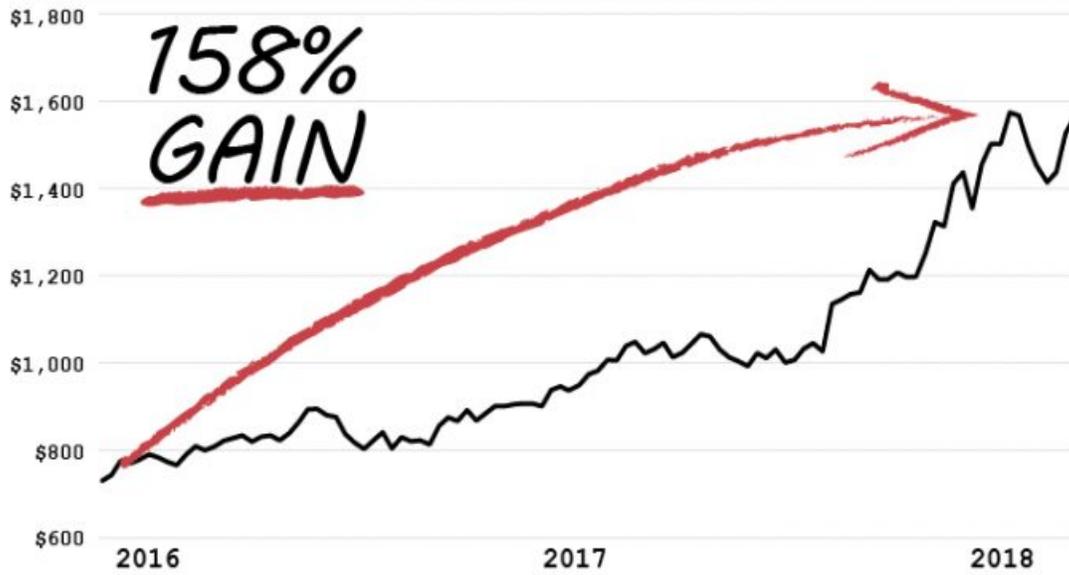

However, that means my digging often uncovers undervalued companies they overlook.

And because I don't work for a company that sells securities, I'm never pressured to recommend a stock unless I truly believe it will produce superior returns.

Here are just a few examples of my recent recommendations...

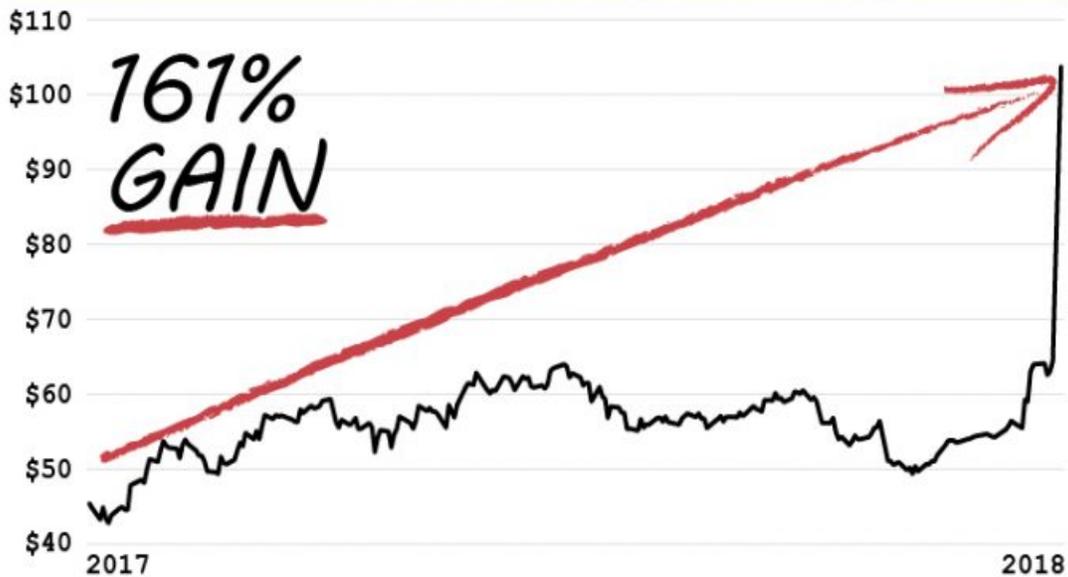

158% on Amazon...

# Amazon (AMZN)

161% on Bioverativ...

# Bioverativ (BIVV)

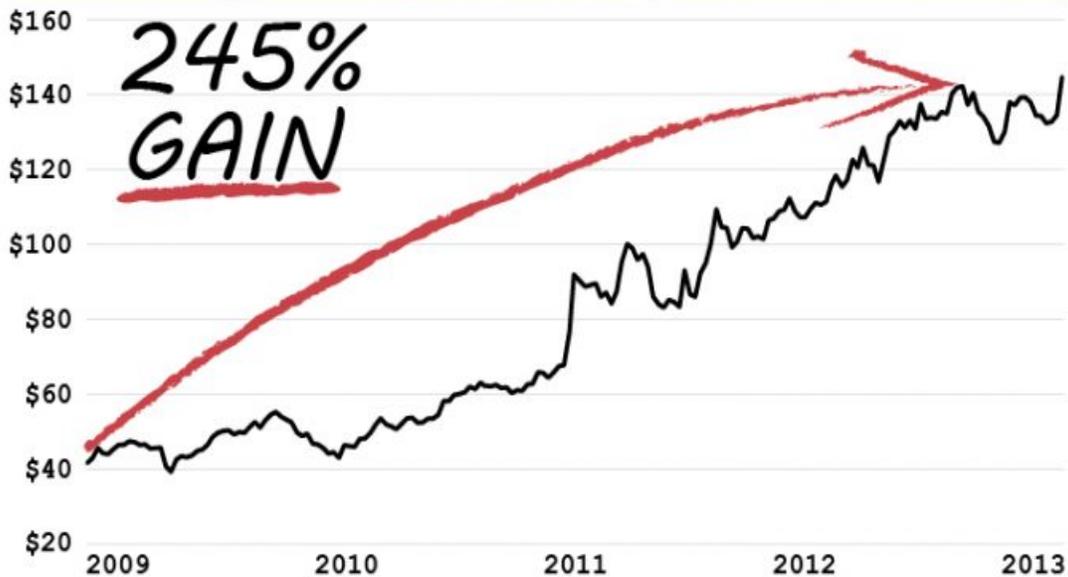

206% on Microsoft...

# Microsoft (MSFT)

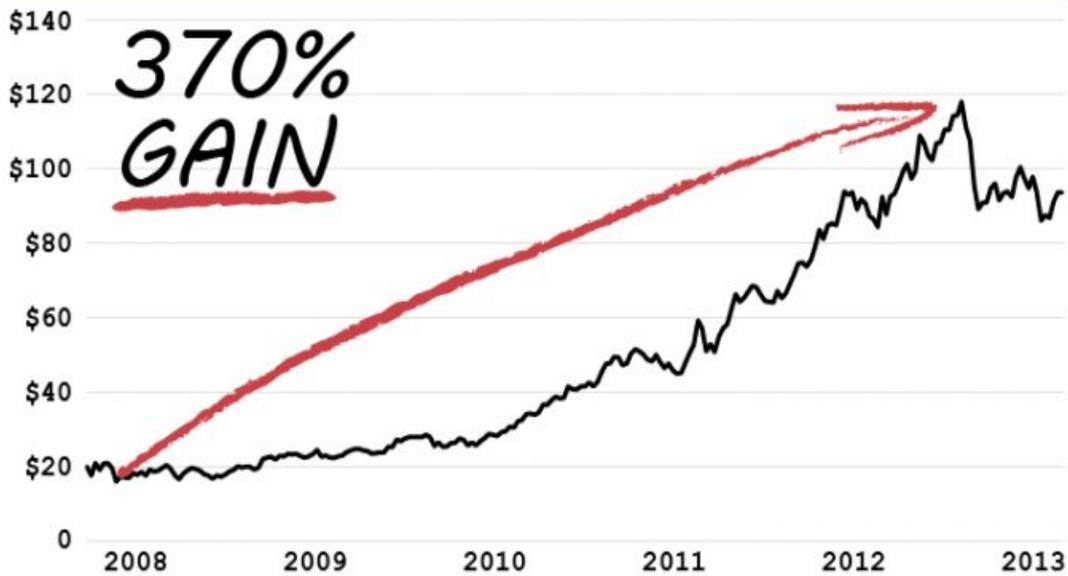

245% on Biogen...

# Biogen (BIIB)

And 370% on Alexion Pharmaceuticals...

## Alexion Pharmaceuticals (ALXN)

Each of these recommendations generated returns that outpaced the market by huge margins.

Readers who invested just \$10,000 in each stock could have pocketed \$164,000 for an overall return of 228%.

And while \$164,000 is a fantastic win...

It's absolutely nothing compared to the gains you could see when you follow the instructions I'm going to share with you today.

Let's start with...

## **The real reason you can't retire yet.**

If you're like most serious investors, your retirement account contains a combination of stocks, bonds, ETFs, and mutual funds.

And if you look at your account statement, you'll see some positions have made money...

Some have lost money...

And some are close to flat.

Think about how much better your financial situation would be today if you'd only invested in the "winners."

Now imagine how your account balance would look if you'd only invested in the single biggest winning stock in your portfolio.

If you've been lucky enough to pick just a single "ten-bagger" in your lifetime and you'd invested everything in that one stock...

There'd be a lot more zeros on your account balance.

But it's unlikely you've ever dared to invest the bulk of your savings in a single stock.

And here's why...

## **The Myth of Diversification**

The fact that you can't afford to retire yet is not your fault.

You see, every business school in the country...

Every investing book and website...

And every broker and financial advisor training program ever created...

All of them preach “diversification” like it’s the Holy Grail of investing.

In a nutshell, diversification says you lower market risk by owning multiple investments rather than just one or two.

As the theory goes, if you own a lot of different investments, one or two can “blow up” without harming your life savings in a big way.

ETFs and mutual funds are the most extreme examples of diversification.

They often hold hundreds and sometimes thousands of different stocks.

But even if your investment account contains more than 5 or so individual stocks today, you’ve also fallen prey to the diversification myth.

Here’s the truth... and it’s something Wall Street insiders don’t want you to know...

Diversification is not designed to make you wealthy.

It’s designed to protect you from all the bad tips, recommendations, and advice “insiders” offer you.

The world’s most successful investor, Warren Buffett, summed it up nicely when he said...

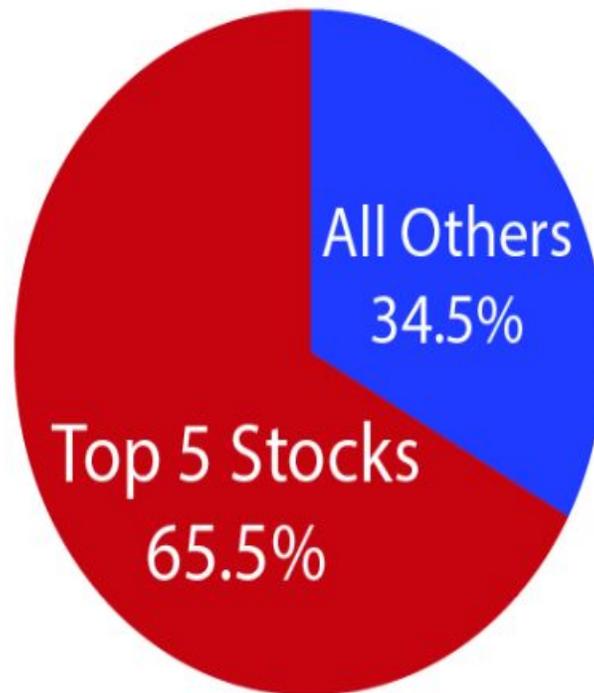

**“Diversification is protection against ignorance. It makes very little sense for those who know what they’re doing.”  
—Warren Buffett**

And Mr. Buffett isn’t afraid to put his money where his mouth is.

At the end of 2017, his Berkshire-Hathaway fund held assets totaling \$171 billion.

But 65% of those assets—or \$112 billion—was invested in only five stocks.

## Berkshire-Hathaway (\$171 Million)

With a 53-year track record and annualized returns that are more than double those of the S&P 500, it's clear Berkshire-Hathaway's methods work well.

And speaking of the S&P 500, 2017 was a good year for the market.

The S&P 500 index returned 19.4% between January and December.

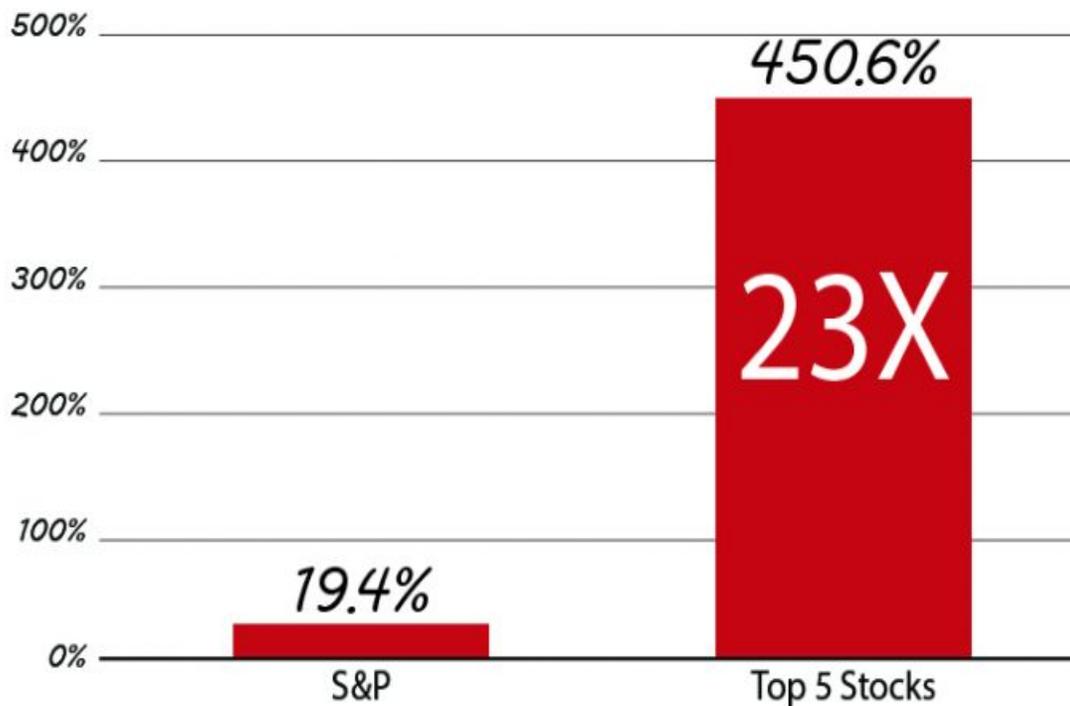

If you'd invested in an ETF that tracked that index closely, it's likely you'd be happy with the gains in your account.

But what about 2017's top-5 performing stocks?

They returned an average of 450.6%...

More than 23 times the S&P 500.

## 2017 Returns: S&P 500 vs. Top 5 Stocks

The point here is clear...

When you diversify, you reduce returns.

That's because losing stocks offset the gains on winners and drag down your overall return.

To be clear, I'm not saying you should never own more than a single stock.

What I'm saying is...

Brokers, mutual fund and ETF managers, and other Wall Street insiders don't preach diversification to make you rich.

They preach it to make their jobs easier.

Diversification allows them to make lazy recommendations...

Fill their pockets with commissions and management fees...

And remain confident you'll keep coming back as long as they drop some mediocre, watered-down returns into your account each year.

I'm happy to tell you, there's a much better way to build wealth.

And it doesn't require more money, more time, or more hard work from you.

Here's how it's done...

## Retire wealthy in two easy steps.

Remember our new millionaires, Denise, Patty, and Joseph?

The image shows three overlapping stock transaction forms. The top form is for Denise Grant, the middle for Patty Donovan, and the bottom for Joseph Cameron. Each form includes fields for Date, Account Number, Account Holder, Symbol, Description, Price, Buy Qty., Sell Qty., Gross Amount, Interest, Commission, State Tax, Sec Fee, Service Chg., and Net Amount. The Net Amounts are highlighted in yellow.

DATE	ACCOUNT NUMBER	ACCOUNT HOLDER	SYMBOL	DESCRIPTION	PRICE	BUY QTY.	SELL QTY.	GROSS AMOUNT	INTEREST	COMMISSION	STATE TAX	SEC FEE	SERVICE CHG.	NET AMOUNT

These average investors followed a simple two-step process that resulted in each of them adding between six and seven figures to their retirement accounts.

Here's the process:

**Step 1:** Buy the right stock at the right time.

**Step 2:** Sell the stock when it's close to its peak.

That's it.

No... this isn't a practical joke.

These two steps worked 100 years ago.

They work today.

And they'll work 100 years from now.

When you pick the right stock at the right time...

You can forget about ETFs and mutual funds.

You can forget about buying dozens of stocks and watching their prices bounce up and down day after day and year after year...

And you can forget about chasing every “hot tip” someone whispers in your ear.

Because you can produce incredible, life-changing wealth from a single stock.

## **Surely, it can't be that easy!**

Now, you may be thinking...

*“Yes, but how do I know which stock to buy and when to buy it?”*

It's an excellent question.

It takes years of experience, hard work, and research to identify the next Amazon, Netflix, or Google...

It's not a job you want to leave in the hands of a tipsy dinner party guest, a loud-mouth neighbor, a talking-head news anchor, or a broker with not-so-noble motives.

Here's the good news...

You don't have to worry about picking the “right stock” because...

I'm going to do it for you.

None of your neighbors, friends, family members... not even financial news jockeys or brokers will have the information I'm sharing today.

That means you'll be able to buy this stock at the lowest possible price and have an opportunity to add seven-figures to your retirement account.

But you'll have to act quickly...

I believe this break-out stock is only a few weeks away from taking off...

And turning every \$10,000 into as much as \$1 million... maybe even more.

**This is the right stock and  
now is the right time.**

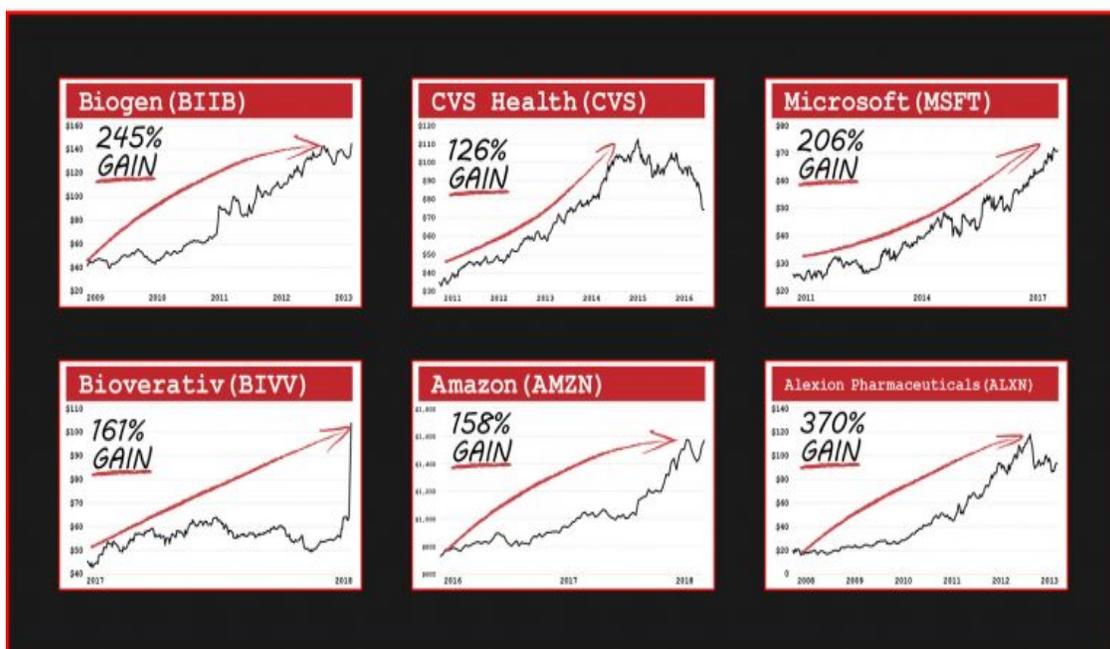

Every year, my team and I analyze hundreds of different companies in our search for huge profits.

We have high standards, so most companies don't make the cut.

But each year, somewhere between 15 and 20 companies impress us.

So we recommend their stocks to readers and monitor their performance closely.

Over time, our track record has been impressive.

But once or twice a decade...

We find a company that's truly special.

A company with the right product, the right market, and the right timing.

A company that's perfectly positioned to become the next market disruptor...

One with the potential to create the retirement of your dreams.

My team and I have recently discovered one of these.

And I'm going to share it with you today.

# Disruptors create millionaires quickly.

True disruptors don't plod along slowly for decades...

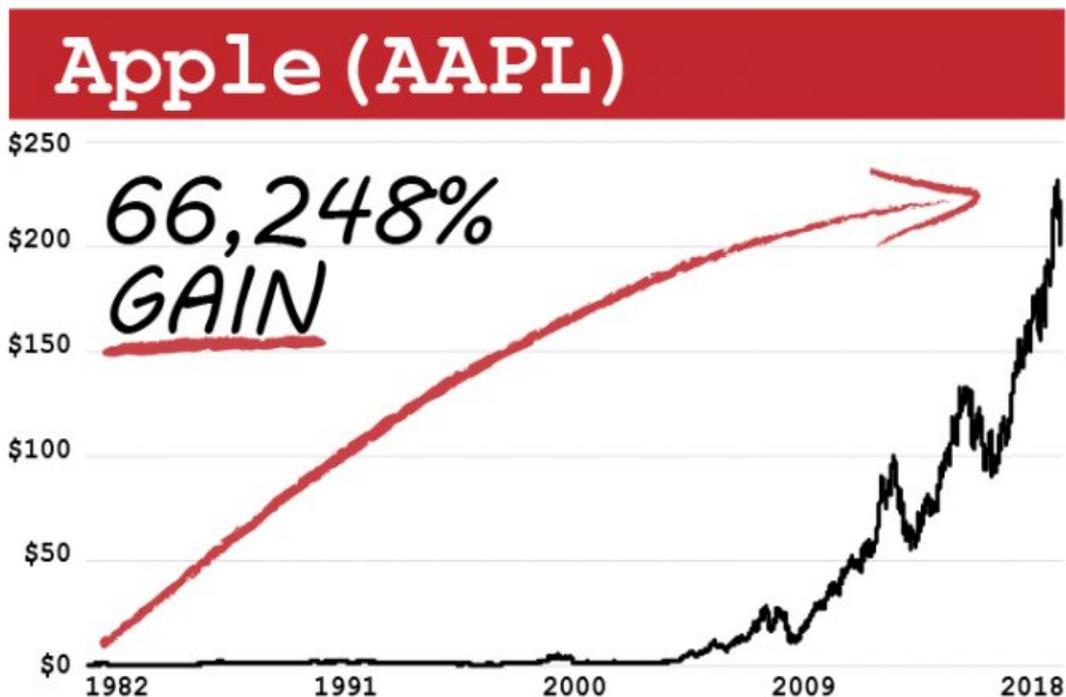

Throwing off just enough annual dividends to keep you from getting bored while you wait for the big breakout that never comes.

True disruptors undergo explosive growth.

The kind of growth that makes other companies' stock charts look like flat lines.

For example...

In the 1980s, Apple Computer went head-to-head with IBM in the home computer market...

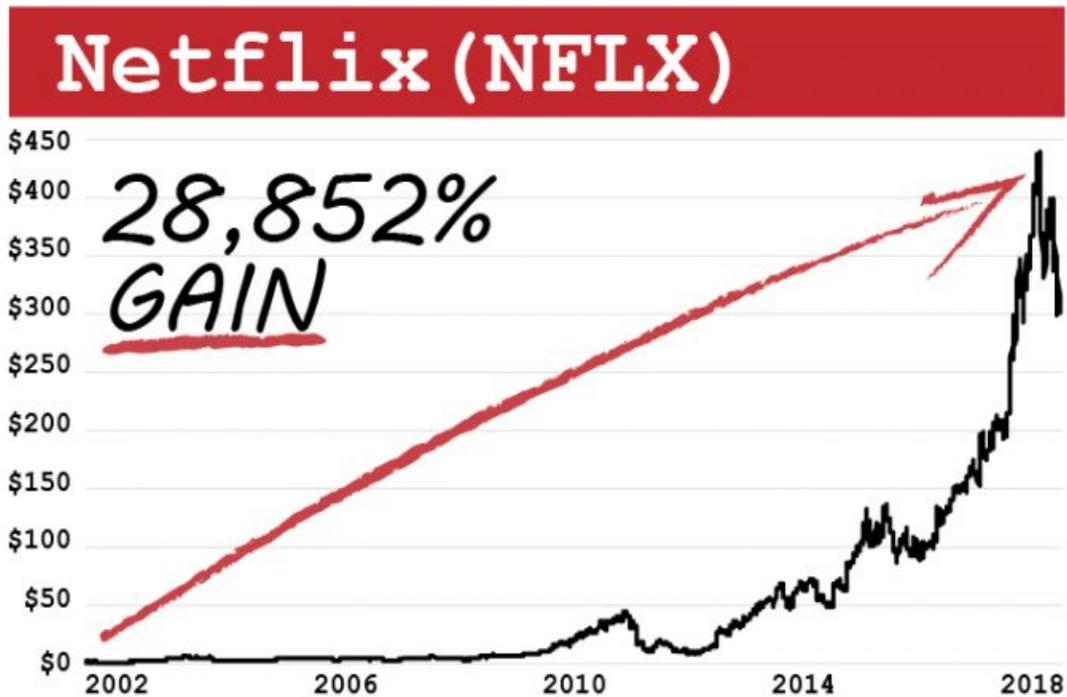

Investors who bought Apple stock close to its IPO price and rode it all the way to today would have seen a 66,248% return.

That's enough to turn a \$10,000 stake into a staggering \$6.63 million.

66,248% Gain!

Since Netflix went toe-to-toe with Blockbuster Video in 2002, it has handed investors more than 288 times their money.

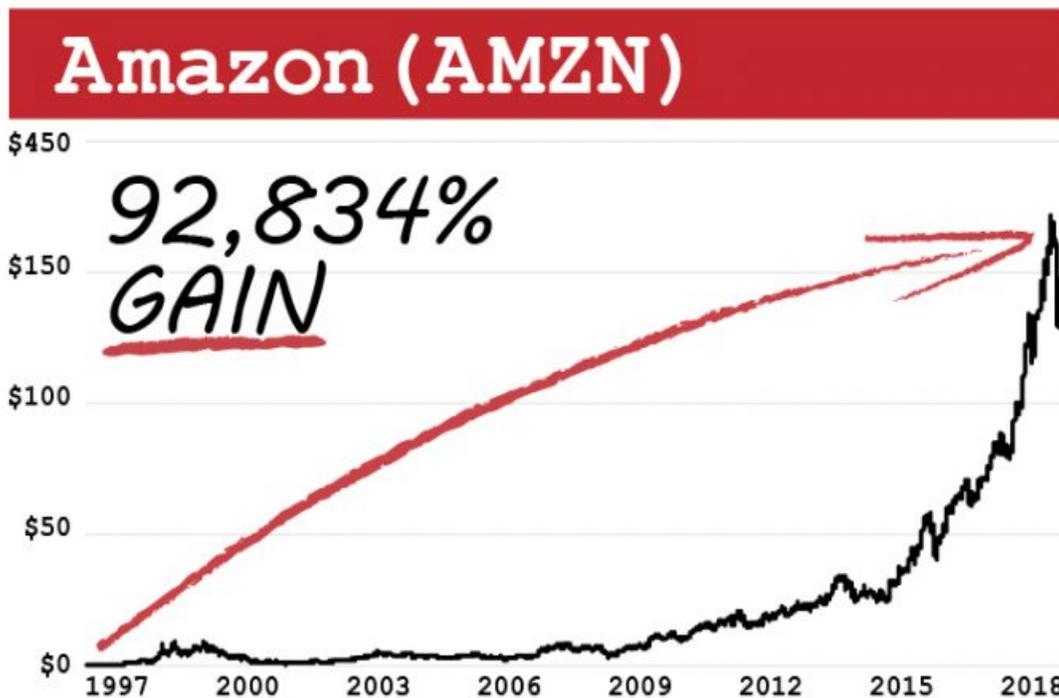

That's enough to turn \$10,000 into \$2.89 million.

28,852% Gain!

And here's what happened when Amazon went up against book retailers Borders and Barnes & Noble...

Investors who picked up Amazon stock when it went public would today be sitting on a return of 92,834%.

That would turn every \$10,000 invested into a life-changing fortune of \$9.29 million.

## **What makes the perfect retirement stock?**

Imagine you're custom designing the "perfect stock" to invest in.

A stock you'd be confident relying on to pay for your retirement.

There's a good chance it would check all these boxes:

It would be a technology company capable of disrupting an existing market... just like Apple, Microsoft, Amazon, Google, and Netflix have done in the past.

It would operate in a market that's growing rapidly.

It would model its business after successful industry leaders... but do things differently and better.

It would be a technology innovator... developing products and services the world has never seen before.

It would have multiple, high-growth sources of revenue.

It would have partnerships and joint ventures with companies who could help expand its core business.

It would have access to large markets its competitors can't access.

But by far, the most important characteristic of a "perfect stock" is this...

It has to be unknown to most investors.

The best buying opportunities are always stocks whose names you don't hear on the evening news.

Unknown stocks aren't in demand...

So you can buy them at the lowest possible price and ride them all the way to the top... making hundreds or even thousands of percent in pure profit.

It might be difficult to believe a stock like this exists.

But it does.

And if you move quickly—before an upcoming event less than six weeks from now—you could have the opportunity to secure the retirement of your dreams.

Now, just in case you're concerned I'm going to recommend you sink your life savings into a risky no-name company, let me assure you...

## **This isn't a shady, penny stock trading on a no-name exchange.**

The company I'm sharing with you today doesn't trade for pennies through a sketchy "boiler room" brokerage shop in a rural strip mall.

Not even close.

In fact, the company's IPO price was in the mid-teens and it's been trading actively since early 2018 on one of America's largest exchanges.

My point is... there's nothing shady, sketchy, or suspicious about this company or its stock.

It trades at a healthy double-digit price, in U.S. dollars, on an exchange whose name you'd immediately recognize.

So you might be wondering...

## **Why haven't you heard of this company?**

To answer this question, I want you to think about Google, Amazon, Netflix, and Facebook.

Today, these companies are household names worth billions of dollars.

But there was a time, not too long ago...

When "google" was a noise babies made when they were happy...

And "Amazon" referred to a rainforest in South America.

Make no mistake... the companies existed. Some were even on the verge of being wildly profitable.

You simply hadn't heard their names yet.

Neither had your neighbors.

Or even your broker.

The very fact that these companies were unknown is what allowed them to disrupt entire industries.

You see, multi-billion dollar corporations don't fear unknown startups.

They're too busy worrying about earnings estimates, market share, and testifying in front of Congress to worry about the "mosquito in the room."

That gives tiny startups a huge advantage.

With no one paying attention, unknown companies can swoop in "from out of nowhere", steal customers, and often topple industry leaders... sometimes in a matter of months.

It's only after their stock price shoots up hundreds of percent that disruptors become household names.

So the fact you haven't heard of the "mystery disruptor" I'm sharing today is a very positive sign.

It means the company's still flying below the radar.

It means their stock price is still reasonable.

And it means you still have an opportunity to build a secret position...

Before the price skyrockets.

Now, let me quickly explain what makes this disruptor the "perfect stock."

## **Modeled after the best in the business.**

Our unknown company is a video streaming platform.

It's a little like Netflix and a little like YouTube.

In fact, it's a combination of both... only better.

Like Netflix, the company creates its own original content... close to 200 new movies and series in 2018.

And it charges subscribers a monthly fee for unlimited access to the entire advertisement-free video library.

But the company also has a YouTube-style membership level where viewers can watch millions of non-premium videos for free.

With a free membership, viewers see advertisements during the videos they watch.

This is often known as a “freemium” model and it’s ideal for our disruptor because...

It allows them to make money from both paying and non-paying subscribers.

Incredibly... despite offering a free membership level, the percentage of paid subscribers has increased by 6X since 2015.

## **Leading the industry in technology innovation.**

One of the “perfect stock” criteria we defined earlier included bringing new, innovative products to market.

Here are a few ways the company is breaking new ground.

### **A Leading-Edge Set-Top Box**

In collaboration with a major cable provider, the company has released the industry’s first-ever hybrid set-top box combining video streaming and cable television in the same device.

Industry revenue potential: \$29.8 billion annually by 2024

### **The World’s Most Advanced VR Headset**

In 2018, the company released the world's first 4K resolution, low-latency Virtual Reality headset. It's designed to give both gamers and movie viewers a lifelike, immersive experience not available from any other device on the market.

Industry revenue potential: \$100 billion annually by 2027

## Video Games

In 2017, the company teamed up with NVIDIA and Nintendo to bring a collection of classic Nintendo games to the platform.

And in mid-2018, they spent \$300 million to acquire a video game firm to develop a suite of games based on the company's most popular movies and dramatic series.

Industry revenue potential: \$180.1 billion by 2021

## Strategic partnerships.

In addition to growing its subscriber base organically and expanding its video library with original content, the company has been quietly building partnerships with other industry leaders.

### Affiliate Relationships

The company has deals in place with online travel agencies and e-commerce retailers to offer discounts and affiliate deals to one another's subscribers.

In 2018, just one of those partnerships generated one million new subscribers in a single week.

### Movie And Television Content

Despite developing 200 new movies and shows of its own in 2018, the company has licensing agreements to stream content from some of the biggest Hollywood studios including Paramount, Warner Brothers, Lionsgate, Fox, Sony, Disney, and Universal.

They even have a deal in place with Netflix... to distribute some of their top-rated movies and series.

## Live Professional Sports

One of the most common complaints about video streaming services is the lack of live sporting events.

In 2018, the company solved this problem by partnering with a major sports media firm to bring professional soccer, tennis, and golf coverage to the platform, including...

The English Premier League, the UEFA Nations League, the Australian Open, the ATP Tour, the WTA Tour, the U.S. Open, the Masters, and others.

## **Explosive growth.**

The company recently released its 2018 third quarter financial results.

Here's a summary...

Subscriber revenue increased 78% over the third quarter of 2017.

Revenue from the sale of online games and merchandise was up 157%.

Revenue from original content licensing and distribution was up a whopping 220%.

Total subscribers increased 89% year over year.

In fact... during the third quarter of 2018, the company added twice as many new subscribers as Netflix.

Now, 2X may not sound like a lot...

But it's exactly where we want them to be right now.

A bigger increase over the industry frontrunner would most likely get the attention of the mainstream media.

Meaning more people would know about the company, the stock price would jump, and we'd miss the opportunity to buy it cheaply.

So far, I've revealed how the "mystery disruptor":

- Uses a "freemium" model to generate revenue from both paid and unpaid members.

- Has increased paid monthly subscriber rates by 566% in the past three years.

- Has some of the world's most advanced technology products... each with the potential to generate billions in revenue.

- Is quickly becoming a leader in live sports streaming... adding professional soccer, tennis, and golf in 2018.

- Has built partnerships with industry leaders to help grow the subscriber base and build its video library... including a deal with Netflix — one of its biggest competitors.

- Is undergoing explosive growth in subscribers and revenue... adding twice as many subscribers as Netflix in the most recent quarter.

This combination of accomplishments puts the company in a prime position to secure large revenue shares from several sources in the coming months...

But there's one important detail I haven't shared with you yet.

And I believe it will be the one that sends the company's stock price into the stratosphere.

# The company has a secret weapon...

As you've guessed, our disruptor's biggest competitors are Netflix and YouTube.

But as well-known and successful as both companies are...

There's one market neither company has been able to break into.

And that is...

You  
guessed  
it...  
China.

The  
Chinese

government maintains rigid control over the information its citizens are allowed to access.

So most of the search engines, video streaming services, and social media platforms we use every day in America are completely banned behind "The Great Firewall of China."

When it comes to making money in that country...

Netflix, Amazon Video, Hulu, YouTube and all other video platforms are completely out of luck.

And that's terrible news for them because...

China currently has 802 million active Internet users.

That's more Internet users than the combined populations of Japan, Russia, Mexico, and the U.S.

And China's Internet user population is expected to grow to 1.14 billion by 2022.

By comparison, there are only 287 million Internet users in the entire United States.

Right now, China has what every video streaming platform wants...

A population that's new to the Internet, growing quickly, and absolutely rabid for high-quality movies, series, video games, and sports.

But because Netflix, YouTube, and the other well-known companies are banned, they're missing out on billions of dollars in revenue.

However...

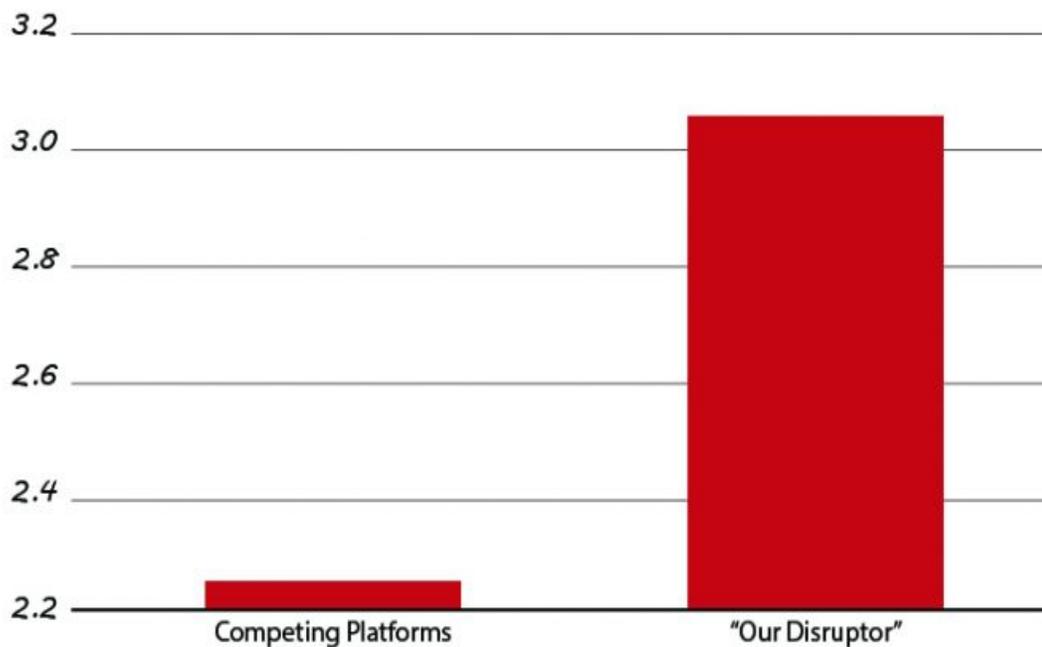

The company I'm sharing with you today is not banned from the Chinese market.

The company's CEO has a special relationship with key decision makers within the Chinese government.

So it's able to generate advertising and subscription revenue by tapping directly into China's gigantic 802 million viewer market.

And that gives the company a huge advantage over Netflix, YouTube, Amazon Video, Hulu... and every other video platform you might be familiar with.

## Potential Customers in World's Top 20 Countries

At this point, I've shown you how strong our disruptor is in subscriber and revenue growth, technology innovation, partnerships, and unique access to the world's largest market.

And I've explained how each of these factors makes the company better positioned than its rivals to:

- Capture market share, and

- Generate multiple sources of revenue

All of this information bodes well for the future of the stock... and your ability to ride it to Google or Amazon price levels.

But there's one piece of information my team recently uncovered that leads me to believe we're running out of time to buy this stock at a bargain basement price.

And it's this...

**Wall Street is starting to catch on.**

I'd like to say one else in the world knows about this company except me and my team. But...

A number of Wall Street's top banks, insurance companies, and hedge funds have been quietly building multi-million dollar positions in the company's stock.

These firms are smart enough to know about the company's growth and they're securing a piece of the action before it becomes a household name.

### **Banks, Insurers, and Hedge Funds are Buying...**

GQG Partners already owns almost 1.3 million shares
Wells Fargo and Manufacturer's Life each own 2 million shares
Davis Selected Advisers is sitting on a whopping 3.1 million shares

As of right now, Wall Street institutions own a small fraction of the company's outstanding shares.

But that could change any day.

It will only take one financial news network to blast the company's name and logo on the evening news...

At that point, I predict it will be too late.

Right now, you still have an opportunity to join the small number of financial institutions and insiders who are waiting patiently to get rich as soon as the news breaks. But...

## **Time is running out.**

Our "video disruptor" is ideally positioned to turn the video streaming market upside down and crush the industry leaders.

It's still cheap enough to offer a lot of upside potential...

You can still buy a share of the company's stock today for a little less than the cost of two movie tickets.

But here's why I believe that won't be the case for very long...

During the company's third quarter earnings call, the Chief Financial Officer discussed the possibility of increasing its monthly subscription fee.

He didn't discuss the size of the increase, but...

I've run some numbers and my analysis shows that just a \$1 per month increase would generate...

An addition **\$949 million in annual revenue.**

And that's with zero subscriber growth.

Because the company has had phenomenal success turning free users into paid subscribers, I believe a price increase is coming soon.

My gut tells me that in early January 2019... as soon as we're clear of the holidays... the company will announce an increase.

Will it be one dollar?

Two dollars?

More?

Even a one dollar increase could generate almost \$1 billion in additional revenue.

Combine that with access to the 802 million user Chinese market...

And there's no doubt in my mind the media, Wall Street, and your Great Aunt Ruth will be all over this company.

They'll become a household name—just the way Netflix and YouTube are today...

And the stock price will skyrocket overnight.

Could it go as high as Netflix at \$317?

Google at \$1,082?

Or maybe even as high as Amazon at \$1,755?

If the stock reaches Amazon levels, a \$25,000 stake turns into \$2.1 million.

# 8,308% Gain!

Could it go even higher than Amazon?

It's impossible to say right now.

What I can say for certain is this...

Only those who act quickly will reap all the rewards this stock has to offer.

And I'd like you to be one of them.

That's why I want to send you my brand new report...

"The Video Disruptor: How to Retire a Millionaire on This One Obscure Stock"

If I were selling this report (which I'm not), it would cost \$79.

But I want to send it to you today—ABSOLUTELY FREE.

Inside, I'll share everything I've discovered about this company.

I'll give you the full rundown on how Netflix and YouTube's dominance was the catalyst for the company's video platform.

I'll cover the specific revenue sources and partnerships I believe will have the greatest impact on the company's future profits.

I'll reveal how the company's special relationship with China opens the door to billions of dollars in revenue in the coming years.

And most importantly, I'll give you precise instructions on how to buy this stock in a regular brokerage account.

If you act quickly on this information, you can buy this stock at the lowest possible price...

The same price at which Wall Street banks, insurance companies, and hedge funds have been secretly building multi-million dollar positions.

And while this one stock could easily set you up for life... it's not the only insider secret I want to share with you today.

As we discussed earlier, when it comes to retiring wealthy...

Poorly performing stocks are your enemy.

To help you get rid of the "dogs" in your portfolio, I've created this bonus report...

## **Bonus Report #1: Blue Chip Blacklist for 2019 (Value \$59)**

A big part of what I do every day involves helping investors make money.

But an equally important part of my job is preventing readers from losing huge portions of their life savings.

So when I see a company that's in financial trouble or an economic trend that's going to be bad for an entire industry, I sound the alarm as quickly as I can.

In this exclusive report, I reveal 10 Wall Street “darlings” I believe are overvalued and in serious danger of being toppled by the growing risk of inflation and the potential for a full-on trade war. These include:

A one-time tech leader who's failed to keep up with advancements in cloud computing and artificial intelligence.

A retail giant whose lowest-price strategy has eaten too far into profit margins and growth.

A food manufacturer whose sugary treats are becoming a liability with today's health-conscious consumers.

If you own any of these stocks, you'll want to take profits immediately... and not look back.

I want you to send you the "Blue Chip Blacklist for 2019" absolutely free. You can have both reports in your hands less than 10 minutes from now.

But before we move on, there's one more bonus I'd like to share with you...

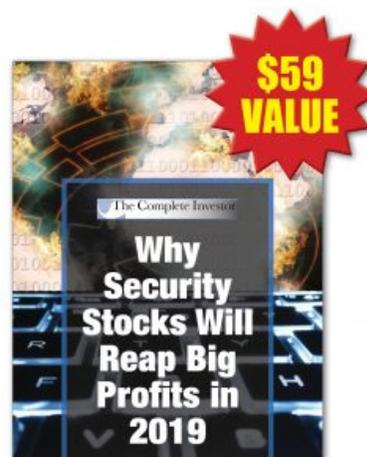

## **Bonus Report #2: Why Security Stocks Will Reap Big Profits in 2019 (Value \$59)**

As much as I hate to admit it, the world is becoming a more dangerous place with each passing year.

America and its closest allies continue to be targets of terrorism and other forms of aggression from enemies around the world.

This is why defense contractors and other companies in the security sector will see increased demand for their products and services in the coming years.

In this report, I reveal:

The single-biggest — and growing — security risk facing the world today and how it threatens our American freedom and way of life.

My two top stock picks in the security sector — both are posting double-digit gains in a \$200 billion industry that's growing every year.

The special report and two added bonuses have a combined value of \$197.

But I want to send you all three reports absolutely free as a thank-you gift for accepting a risk-free, no obligation trial membership in our advisory service.

## **Join One of the Most Prestigious Investment Advisory Services in America**

Our investment advisory is called *The Complete Investor*.

And our mission is simple...

To help people like you make smart investment decisions so you can enjoy the retirement of your dreams.

The moment you accept your risk-free trial, you become a full-fledged member of *The Complete Investor* with access to all the privileges and services that entails.

Your membership includes...

## Membership Benefit #1: 12 Monthly Issues of *The Complete Investor*

In each monthly issue, my team and I provide a detailed economic outlook, model portfolio summaries, investment recommendations, and specific buy, sell, and hold indicators for each model portfolio position.

As a

member, you have exclusive, unlimited, around-the-clock access to our private website.

Here, you'll find a searchable archive of past newsletter issues, special market reports, FLASH Alert histories, and model portfolio details.

### Membership Benefit #5: Direct Access to Me

I'm available almost every day during business hours in the members-only *Stock Talk* forum. Any time you have a question or need clarification on a recommendation

or alert, just pop your question in the forum and I'll get back to you with an answer as quickly as I can.

### Membership Benefit #6: *The Complete Investor* Premium Concierge Service

As soon as you become a member, you'll have immediate access to a special phone number where you can reach my VIP concierge team every weekday during normal business hours. The team is standing by to ensure any questions, concerns, or problems you have as a member are dealt with quickly and thoroughly.

You'll also receive the special report and bonuses I've promised, including...

**The Video Disruptor: How to Retire a Millionaire on This One Obscure Stock (Value \$79)**

**Blue Chip Blacklist for 2019 (Value \$59)**

**Why Security Stocks Will Reap Big Profits in 2019 (Value \$59)**

**Total Value: \$197**

Over the past 15 years, *The Complete Investor* has offered intelligent and timely investment advice to tens of thousands of members.

Many started out as beginner investors and have gone on to build millions of dollars in wealth.

Here's another quick look at some of our recent wins...

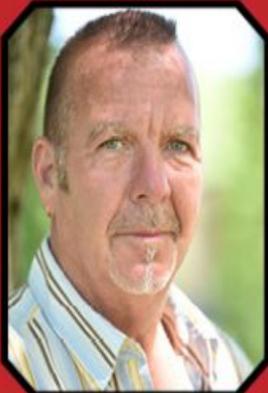

Company (Symbol)	Return
Biogen (BIIB)	245%
CVS Health (CVS)	126%
Microsoft (MSFT)	206%
Merck & Co. (MRK)	97%
Bioverativ (BIVV)	161%
Amazon (AMZN)	158%
Alexion Pharmaceuticals (ALXN)	370%
<b>Total</b>	<b>1,363%</b>

Members who invested as little as \$10,000 in each of these recommendations could now be sitting on \$206,300.

I get great satisfaction from helping people make money.

But some of my proudest moments are when I hear directly from members about how *The Complete Investor* has changed their lives.

For example, there's Donald G. from Schenectady, New York, who shared:

**"Following the recommendations of TCI, I have for the past 20 years beaten the S&P 500 Index in average annual growth per year."**

—Donald G.

There's Ted P. from Bremerton, Washington, who wrote:

"It has helped me,  
in my retirement  
years, to stay in  
the 'game'."

—Ted P.

Then there's Andy L. of Vista, California:

"I've relied on *The  
Complete Investor* for ten  
years. Easy to understand  
investment advice built on  
sound principles that  
pays dividends."

—Andy L.

Amelie G. of Ann Arbor, Michigan dropped us this note:

"The research team and  
the ideas put forth have  
been invaluable to me. I  
particularly appreciate the  
email updates on crisis days,  
it helps me to steady myself  
and look at the big picture  
not just the short-term. Thank  
you..."

—Amelie G.

And there's Gary J. from Bloomington, Minnesota, who shared this:

"*The Complete Investor* provides the best forward looking appraisals of investment opportunities and the most thoughtful specific investments. *The Complete Investor* is the best letter on the market."

—Gary J.

I don't share these quotes to brag.

I share them so you'll know there are real people making real money from the recommendations we make every month inside *The Complete Investor*.

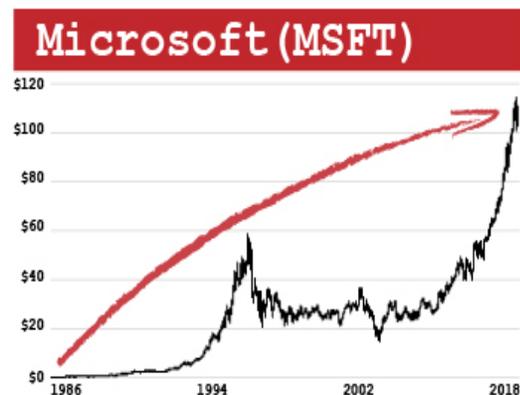

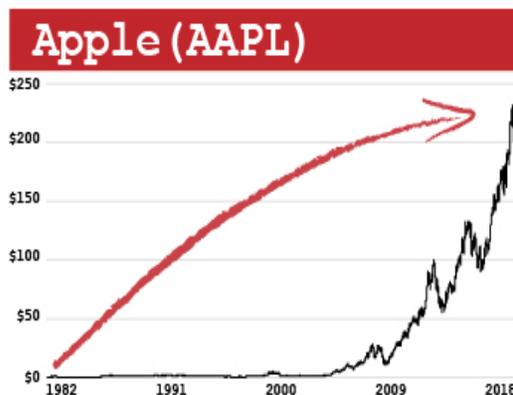

I'm proud of our track record.

And I'm proud our work has improved the financial lives of so many people.

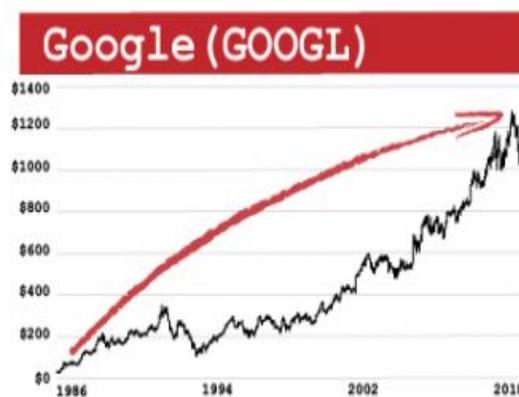

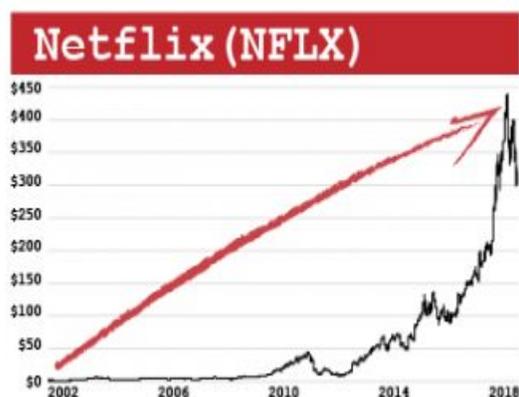

Now, it's time to let me help you.

**The next big disruptor move  
is right around the corner...  
and I want you onboard.**

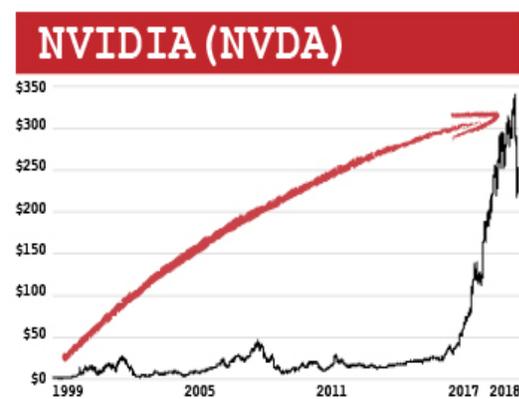

If you missed the big moves on companies like Apple or Microsoft...

If you regret not buying Netflix or Google when they were cheap...

Or if you kick yourself every time you look at an Amazon or NVIDIA price chart...

Even if you missed every big disruptor move in the past 30 years...

You do not have to miss this one.

The company I've shared with you today is likely to blast off within the next six weeks...

Even sooner if the media catches on and spoils the party.

You deserve to win big this time.

And all you have to do is accept a 100% risk-free trial membership in *The Complete Investor*.

Wall Street banks and hedge funds spend millions of dollars a year on the type of in-depth research my team and I share every day inside *The*

*Complete Investor.*

But we have no interest in helping billion dollar companies earn another billion.

Instead, our satisfaction comes from seeing people like you enjoy a stress-free retirement...

One in which you never have to worry about downsizing, budgeting, or coupon-clipping.

We want to help as many people as possible with our investment research.

That's why we charge so little for membership in *The Complete Investor*.

Normally, it's just \$129 for a full year.

And that's a bargain considering you could easily make enough from a single stock recommendation to pay for your membership fee 100 times over.

If you get in early on "The Video Disruptor", you could even cover your membership fee 10,000 times over.

I want you to know how it feels to be catered to with the best investment research available anywhere in the market.

And I want you to have access to that research without any major impact on your current spending habits or budget.

So to make this decision as easy as possible for you, my publisher has given me permission to offer you membership in *The Complete Investor* today...

For only \$39.95.

Over the course of a one-year membership, that amounts to \$0.11 a day.

I think you'll agree, the opportunity for true financial freedom...

For a better life for yourself and your loved ones...

And for the retirement lifestyle of your dreams...

All of this is worth far more than a mere \$0.11 a day.

You won't find this offer available anywhere else at a lower price.

And if a 70% discount isn't enough...

I'm going to take all the risk by giving you a 90-day 100% money-back guarantee.

Take 90 days to review everything I've shared with you today.

See how "The Video Disruptor" performs over the next few months. Follow the "blacklist" and security stocks I discuss in your bonus reports. Review our historical portfolio performance. Maybe even drop a question or two in the *Stock Talk* forum.

And no matter how much money you make from my recommendations, you have my word...

## My 90-Day 100% Money-Back Guarantee

You can call us any time and for any reason during the next 90 days and receive a full refund of your membership fee—no questions asked. PLUS, you get to keep all the reports and bonuses you receive today.

Even after 90 days have passed, you'll still be able to change your mind. We'll simply prorate your fee and refund you for any unused months remaining on your membership term.

And even if you decide *The Complete Investor* isn't right for you, you still get to keep all the reports and bonuses you receive when you join today.

Consider them a thank-you gift for trying us out.

**Right now, you're at a crossroads.**

At this point, there are only two paths you can follow:

1. Take a position in “The Video Disruptor” right now while the stock is still cheap. Then over the next few months, whenever you hear the company’s name in the news, you can give yourself a high-five knowing there’s a good chance your share price is increasing.
2. Ignore this opportunity completely. Then every time you check the stock’s ticker, you’ll kick yourself (again) for missing out on a once-in-a-decade disruptor that could have paid for your retirement.

A lot of people have faced decisions like this.

And those who’ve chosen wisely have come out the other side completely transformed.

I’ve been analyzing markets and companies for well over a decade.

Others on my team have as many as 35 years in the trenches.

And we all agree... “The Video Disruptor” is one of the biggest opportunities we’ve ever seen...

Bigger than Apple, Microsoft, Amazon, Google, Netflix, or NVIDIA.

And if you play this one right, it may be the only stock you need to enjoy a stress-free, luxury retirement... anywhere in the world you decide to live.

But one last word of warning...

You only have a few short weeks to make a move.

It will only take a one dollar a month price increase for this company to generate almost \$1 billion in additional revenue.

When that happens, Wall Street will pay attention and the company will become a household name.

If you miss the opportunity to get in at today’s price, well...

You may not get a second chance.

There are thousands of member success stories inside *The Complete Investor*.

And I'd like you to become one of them.

Owning shares of "The Video Disruptor" is likely to be the best investment of the decade.

If the stock price rises to Netflix levels, you'll be looking at a 1,423% return.

If it shoots up to Google levels, you'll be sitting on a 5,086% gain.

And if it skyrockets to Amazon levels, you'll be handed a return of 8,308%

That's enough to turn a \$25,000 stake into \$2.1 million.

Opportunities to retire on a single stock don't come along often.

I admit, it takes a lot of guts to buy a stock your neighbors, friends, and most CNBC announcers have never heard of.

But pushing past the discomfort could make this the most important financial decision you make in your entire life.

Click the button below and let's get started right away.

Thank you for your time and attention. I look forward to seeing you inside *The Complete Investor* very soon.

Sincerely,

*Scott Chan*
